## CLIMATOLOGICAL

38	VIRGINIA SECTION	
	F. N. HIBBARD	
Vol. LII	RICHMOND, VA., YEAR 1942	No. 13

The general weather for the year was slightly warmer and considerably wetter than usual. The 52-year record shows 18 warmer years, but only three wetter ones. The amount of snow was normal; the number of rainy days has been exceeded only once; and the number of cloudy days, only 10 times in the past half century.

In temperature, the mean for the year 56.4° may be compared with 58.4° in 1921, and 53.3° in 1917. March to July, and October and November were the warm periods: and state record extremes were approached by individual stations in May. June, July, August, and November. Comparatively cold weather prevailed during the winter months, record minima for the state were approached in August and September. In this latter month, new low September records were established for about half of the temperature stations.

Precipitation was greater for the state in only three previous years, 1901, 1906, and 1937; and the great excess of more than seven inches in 1942 fell principally in August, September and October; which months combined produced about nine inches more than usual. August was the third wettest of record; and October the fifth; and during the latter, nearly 18 inches fell at Riverton, and more than 21 inches at Big Meadows, and about a dozen stations in the northern half of the state exceeded 10 inches. December also was wet and ranked seventh wettest of record. February and April were abnormally dry, particularly April, which had next to the least rainfall of record.

Deficient soil moisture gave crops a slow start but this was quickly overcome except in the Tidewater where drouth conditions continued until August. Early crops in the Tidewater were poor; otherwise they were normal or better. Heavy rains in late summer and fall damaged all late crops and made harvest dfficult.

A snow storm on March 2-3d was one of the worst of record in the mountain counties and resulted in the death of two men. On July 8th a flash flood caused more than \$150,000 damage at Pound, Va. On August 12-18th local floods in Smythe and Wythe and Campbell counties caused about \$28,000 damage. General floods occurred October 12-18th. In northern Virginia streams were the highest ever known and damages amounted to several millions of dollars. Many railway and bightering amounted to several millions of dollars. Many railway and highway bridges were washed away and more than 1,000 miles of fences destroyed. A million bushels of apples were caused to drop before they could be picked. One life was lost and about 1,300 people made homeless. Damage along the James was slight. -S.B.T.

Section and State averages are computed from monthly means. The mean departures from normal temperature and precipitation are based only on records from stations that have 10 or more years of observation. Reference letters, \*, \*, \*, appearing in the tables indicate number of days missing: for example, b represents two days, etc. T. Precipitation is less than 0.01 inch rain or snow. Also on other dates. Interpolated. Prartially interpolated. Procipitation is less than 0.01 inch rain or snow. Also on other dates. Interpolated. Prartially interpolated. Procipitation are based only on records from stations days, etc. T. Precipitation is less than 0.01 inch rain or snow. Also on other dates. Interpolated. Prartially interpolated. Procipitation are based only on records from stations that have 10 or more years of observation. Reference letters, \*, \*, \*, appearing in the tables indicate number of days missing: for example, b represents two days, etc. T. Precipitation is less than 0.01 inch rain or snow. Also on other dates. Interpolated. Prartially interpolated. Procipitation are based only on records from stations that have 10 or more years of observation. Reference letters, \*, \*, \*, appearing in the tables indicate number of days missing: for example, b represents two days, etc. T. Precipitation are based only on records from stations are shown in the tables indicate number of days missing: for example, b represents two days, etc. T. Precipitation are based only on records from stations are shown in the tables indicate number of days missing: for example, b represents two days missing

Note.—In this publication, annual means are computed from data for all stations; except those in supplemental table; whereas, in monthly reports, means may not include all stations, as in some cases reports are not received in time to be used in the computations. All means include the interpolated values.

§ Not used in Sums and Means.

Monthly and Annual Mean Temperatures for the Year 1942 with Departures from the Normal

For explanation of reference marks, see page 50.

Not used in Sums and Means.

ERRATA

DECEMBER, 1942.—Mean temperature for the state, published 36.5° -1.6,° should read 35.2° -2.9°, and the average temperature for the period 38.1°.
