Vol. L RICHMOND, VA., YEAR 1940

No. 13

GENERAL SUMMARY

Virginia weather in 1940 was cooler and wetter than usual. The average temperature was lower in only 1904 and 1917; and precipitation was greater in only 15 years of the past 50.

In temperature, June, November and December were warmer than usual, with December ranking fourth warmest of record. January was the coldest month of record for the State, and during that month new low record readings were established for at least eight stations. Average temperatures ranged from 58.9° at Diamond Springs to 44.6° at Mountain Lake; and departures for the year ranged from $+0.2^{\circ}$ at Clarksville to -3.6° at Christchurch.

In precipitation, amounts were deficient in all except April, May, July and August. The August rainfall was the second greatest of record, and new records for 24-hour amounts were established at 14 stations south of a line from Hopewell to Bedford. Yearly amounts for individual stations ranged from 32.5 inches at Christchurch to 66.6 inches at Pinnacles; and departures ranged from —13.3 inches at Christchurch to +15.9 inches at Roanoke. Heavy snow in January, particularly in east-central counties, was next to the greatest of record, and it brought the yearly total of snow up to the 12th greatest of record.

A cold, wet spring delayed plowing and planting to some extent and by the end of April all crops were two to three weeks late. Temperatures returned to near normal during May and all crops made rapid advance. During the heavy rains of August northern and Valley crops were benefited, but most lowland crops in south-central and southern counties were destroyed, especially lespideza, alfalfa and shocked oats. Killing frosts over the State during October brought the growing season to an end.

The principal events of the year were the heavy snows of January followed by record low temperatures, which entailed a loss of \$500,000 for removing snow and repairing broken pavements, and a loss of life of at least a dozen persons; scattered hail storms from May to August approximating \$60,000; and the record floods of August in the James, Meherrin, Roanoke and Blackwater Rivers entailing damage variously estimated from \$3,000,000 to \$5,000,000.

Section and State averages are computed from monthly means. The mean departures from normal temperature and precipitation are based only on records from stations that have 10 or more years of observation. Reference letters, *, *, *, appearing in the tables indicate number of days missing: for example, * represents two days, etc. T. Precipitation is less than 0.01 inch rain or snow. †Also on other dates. *Interpolated. ‡Partially interpolated. ‡Post-office addresses of these stations are as follows: Diamond Springs, Norfolk; Lincoln, Purcellville; Mount Weather, Bluemont; Wallaceton, Hickory; Pinnacles, Meadows of Dan; Balcony Falls, Glasgow; Big Meadows, Luray; Moores Creek Dam, Lexington; North River Dam, Staunton.

Note.—In this publication, annual means are computed from data for all stations: except those in supplemental table; whereas, in monthly reports, means may not include all stations, as in some cases reports are not received in time to be used in the computations.

All means include the interpolated values.

Monthly and Annual Mean Temperatures for the Year 1940 with Departures from the Normal
