CLIMATOLOGICAL DATA

MARYLAND AND DELAWARE

ANNUAL SUMMARY 1948
Volume LII No. 13

MARYLAND AND DELAWARE, 1948

G. N. Brancato, Section Director - Baltimore, Md.

GENERAL SUMMARY

This was a year of considerable precipitation and near normal temperatures. Precipitation averaged over 12 inches more than normal and all stations reported above normal amounts. The northern portions of Delaware and Maryland, and two small areas near Annapolis and Solomons had precipitation totals closest to the average. Amounts were nearest normal in February, April, June, July and September. Precipitation totals were greatest in Sussex County, Delaware, and in Worcester, Wicomico, Dorchester, and portions of Caroline, Talbot, Calvert, Charles and St. Mary's Counties of Maryland. In portions of the area of greatest precipitation, two periods were outstanding. The first was near Memorial Day when rainfall amounts of 4 to 5 inches were measured. The second and more extensive period of excessive rainfall occurred from July 31 to August 5. There were no dry periods of sufficient length to be detrimental to interests depending on precipitation.

As a result of excessively heavy snowfalls in January and February, the total for the year was slightly above average in Maryland and well above average in Delaware. December amounts were near normal in Maryland and about 60% of normal in Delaware. Very little snow fell in other months.

Although temperatures over the two-state area averaged only three-tenths of a degrees above normal, a few areas recorded fairly wide variations. From Oxford northwestward across most of Anne Arundel County, Howard County to eastern Frederick County, and near Hancock, Maryland, and Wilmington, Delaware, average temperatures were from 1 to 1-1/2 degrees below normal. Temperatures were from 1 to 2 degrees above normal in Somerset, Worcester, and portions of Wicomico, Dorchester, Calvert, Baltimore, Harford, Kent, Washington and Garrett Counties of Maryland, and in and near the District of Columbia. The January temperature was the most below normal while September and October were well below normal. August and November were, relatively, the warmest months, while March, April and December were also well above normal. The warmest period was August 25 to 30 when readings near or above 100 were near record levels. The 107 degree temperature at Glenelg was the highest Maryland temporature since 1936 while the 101 at Milford was the highest Delaware reading since 1940. Cold weather prevailed over the area from January 14 to February 11, with January 31 being the coldest day. A brief cold period also occurred on December 26-27.

Winter grains and grasses emerged from Winter in good condition. The generally warm weather of March and April caused a good growth in all vegetation. Freezing temperatures and damaging frost occurred on April 4, 10, 18. 23 and 29. The frost of the 18th was most damaging to the western Maryland fruit area while the frosts of the 23rd and 29th were the most damaging in Del-Mar Counties.

Heavy previpitation, with the lack of warm daytime sunshine, in May and June was detrimental to many crops. Seeded crops did not germinate properly on the severly eroded fields, fruit blossoms were not pollinated properly and a heavy drop occurred later, hay crops deteriorated due to inability to harvest at the proper time, corn fields became weedy from lack of cultivation, tobacco developed some blue mold, and farm operations were delayed. Many of these conditions improved with drier weather in July when the harvest of truck crops and early fruits was started, and the harvest of Winter grains neared the end. Tobacco was growing well but with some aphid infestation.

Heavy rains in southern and southeastern Maryland and the western portion of Sussex County, Delaware, between July 31 and August 5 flooded many fields and caused some lodging. Otherwise, crops made good development during August. The intense heat of the last week aided some crops but was detrimental to others.

September's weather favored the final development of crops. Corn was being harvested, haying operations were completed, late apples were being picked, and the tobacco harvest was completed. Early sown Winter grains were up in some fields as other fields were being plowed.

Practically all the Winter grains and grasses were seeded by the end of October with many fields up to good stands. Good progress was made in picking and husking a good corn crop. Picking a light crop of apples was almost completed. Pastures were good for the season in most areas.

Winter grains and grasses made good growth during a warm, wet November. The growth was too rank in some eastern areas and pasturing was used to cut the heights of the grains.

Vegetation became dormant in December although there was some growth in eastern areas. Excessive precipitation had prevented the harvesting of some soy beans in eastern areas at the end of the year.

TEMPE RATURE

For Maryland, the annual mean temperature varied from 60.4 degrees at Crisfield to 49.1 degrees at Oakland. The highest temperature was 107 degrees on August 28 at Glenelg and the lowest was 20 degrees below zero on January 19 at Oakland. The greatest local annual temperature range was 117 degrees at Hancock, ranging from 102 degrees on August 29 to 15 degrees below zero on January 26, and at Keedysville, ranging from 102 degrees on August 27 to 15 degrees below zero on January 26. The least local annual temperature range was 88 degrees at Salisbury, ranging from 98 degrees on August 27 to 10 degrees on January 31.

For Delaware, the annual mean temperature varied from 56.0 degrees at Millsboro to 53.0 degrees at Wilmington (Porter Reservoir). The highest temperature was 101 degrees on August 26 at Milford, and the lowest was 3 degrees below zero at Newark (College Farm) on February 7. The greatest local annual temperature range was 101 degrees at Newark (College Farm), having a high reading of 98 degrees on August 27 and a low reading of 3 degrees below zero on February 7. The least local annual range was 88 degrees at Lewes, having a high reading of 97 degrees on August 28 and a low reading of 9 degrees on January 26.

PRECIPITATION

For Maryland, the annual precipitation was greatest at Salisbury with 72.59 inches, and the least at Hancock with 40.22 inches. The greatest 24-hour rainfall was 5.09 inches on August 4 at Salisbury. For Delaware, the annual precipitation was greatest at Lewes with 72.75 inches and least at Wilmington (City Hall) with 45.69 inches. The greatest 24-hour rainfall was 5.40 inches on May 20 at Dover.

SNOWFALL

For Maryland, the greatest annual snowfall was 65.2 inches at Sines (Deep Creek) and the least was 0.2 inch at Crisfield. The greatest depth on the ground was 18 inches on February 4 at Frostburg. For Delaware, the greatest annual snowfall was 30.7 inches at Newark (College Farm) and the least at Georgetown with 16.7 inches. The greatest depth on the ground was 11 inches on February 5 at Wilmington (Porter Reservoir and City Hall).

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages—mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about \$250,000 per year between 1940 and 1944, and nearly \$375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about \$100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about \$25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Delayed data and corrections will be carried only in the June and December issues of Climatological Data.

- No record. Also later dates or months. 1 to 10 days' record missing; see monthly Climatological Data for detailed daily record.

The subscription price for this bulletin is 15 cents per copy or \$1.50 a year. (Yearly subscription includes the annual summary). Correspondence regarding subscriptions should be addressed to Weather Records Processing Center, Federal Building, Albany 1, N.Y.

. W.R.P.C., Albany, N.Y .--- 6-10-49--1375
