Vol.: LVI RICHMOND, VA., YEAR 1946

No. 13

#### GENERAL SUMMARY

Temperatures during the year 1946 were above normal during all of the cold months and subnormal during all of the warm months, with very few days which were either too cold for comfort or unpleasantly warm from mid-March to mid-November. March and November were the third and fourth warmest, repectively, of their names in a 56 year period. August showed the greatest temperature deficiency for the year.

Precipitation for the State as a whole was above normal only in May and July, but the deficiencies during the other months were small and the average for the year was only 3.12 inches below the annual normal. Distribution over the State was rather uneven and drouth conditions prevailed most of the summer inthe middle Shenandoah Valley counties and in portions of Patrick and Henry Counties. Most of the eastern counties experienced unusually heavy rains in July. Snowfall for the year was considerably below normal.

It was an excellent year for agriculture with an unusually long growing season, although some crops were unsatisfactory in the small areas that were too dry. As a rule, wheat, corn, hay, peaches, apples, peanuts, and potatoes were much better than average. Tobacco quality was high, although the yield was not above normal. Blight seriously damaged the tomato crop in the chief commercial areas; otherwise, truck crops were generally good. Pastures furnished good grazing through most of November.

Snow, sleet, and glaze on January 15-21, caused hazardous highway conditions and contributed to many accidents in one of which four persons were killed. Hailstorms appeared to be unusually numerous and accumulated damages amounting to about one quarter of a million dollars were reported. The most severe storm of the season occurred in Augusta, Cumberland, Lunenberg, Nelson, and Nottoway Counties on August 1st. Wind and electric storms caused about \$150,000 damage. For detailed accounts, see the monthly copies of the Section Bulletins. Lightning caused the death of one person in May, two in June, and three in July.

Section and State averages are computed from monthly means. The mean departures from normal temperature and precipitation are based only on records from days, etc. T. Precipitation is less than 0.005 inch rain or snow. †Also on other dates. \*Interpolated. †Partially interpolated. †TPost-office addresses of these stations are as follows: Diamond Springs. Norfolk: Lincoln. Purcellyille: Mount Weather, Bluemont; Wallaceton, Hickory: Pinnacles. Meadows of Dan: Balcony Falls, Glasgow: Big Meadows, Luray: Moores Creek Dam, Lexington; North River Dam. Staunton. Figures and letters following station name indicate distance and direction of station from the city Post Office. \*Also July.

Note.—In this publication, annual means are computed from data for all stations: except those in supplemental table; whereas, in monthly reports, means may not include all stations, as in some cases reports are not received in time to be used in the computations. All means include the interpolated values. \*\*Judics\*\* interpolated.\*\*
